

BeatPush — Google Ads API

Integration Design Document

1. Company Overview

Company: BeatPush
Website: <https://www.beatpush.app>
Industry: Music Promotion SaaS

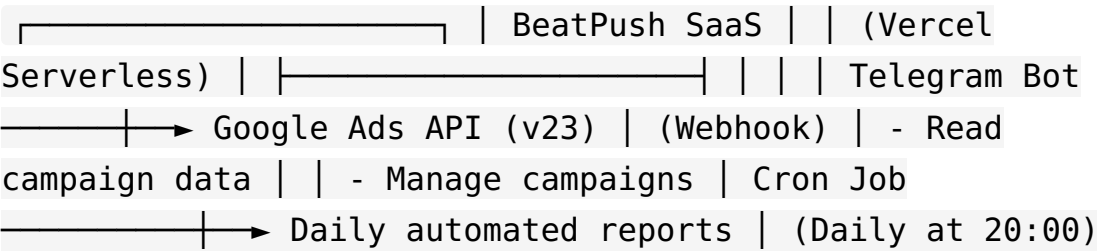

BeatPush is a SaaS platform that helps electronic music producers and record labels promote their tracks on Beatport. Our platform connects artists with DJs and curators to increase track visibility and chart positioning.

2. Purpose of Google Ads API Integration

We integrate with the Google Ads API for **internal campaign management and reporting**. The API is used exclusively by our internal team to:

- **Monitor campaign performance** in real-time (spend, conversions, ROAS)
- **Generate automated daily reports** sent via Telegram to our marketing team
- **Manage campaigns** (create, pause, resume, adjust budgets) without logging into the Google Ads UI
- **Analyze search terms** to optimize keyword targeting

3. Architecture Overview

4. API Usage Details

4.1 Authentication

- OAuth 2.0 with refresh token
- System user with restricted access
- Tokens stored securely in environment variables (Vercel)

4.2 API Operations Used

Operation	Endpoint	Frequency	Purpose
Read Campaigns	campaigns:searchStream	On-demand + daily	List campaigns, status, budgets
Read Metrics	campaigns:searchStream	On-demand + daily	Spend, impressions, clicks, conversions
Read Search Terms	search_term_view	Daily	Keyword optimization
Mutate Campaigns	campaigns:mutate	Rare	Pause/ resume campaigns
Mutate Budgets	campaignBudgets:mutate	Rare	Adjust daily budgets
Create Campaigns	campaigns:mutate	Rare	New campaign creation

Operation	Endpoint	Frequency	Purpose
Create Budgets	<code>campaignBudgets:mutate</code>	Rare	Budget for new campaigns

4.3 Rate & Volume

- **Daily report:** 3 API calls (campaigns, metrics, search terms) — once per day at 20:00 CET
- **On-demand commands:** ~5-10 calls per day via Telegram bot
- **Campaign management:** ~1-2 mutations per week
- **Total estimated:** < 50 API calls per day

5. Data Handling

- No Google Ads data is stored permanently
- Data is fetched in real-time and displayed via Telegram messages
- No data is shared with third parties
- No PII is collected or processed through the API

6. Access Control

- Only authorized team members can interact with the Telegram bot
- Campaign mutations (create, pause, budget changes) require explicit commands
- All new campaigns are created in PAUSED state for safety
- Environment variables are encrypted and managed via Vercel

7. Compliance

- We comply with Google Ads API Terms of Service
- We comply with Google Ads policies
- We do not use the API for automated bidding or ad creation without human oversight
- We do not scrape or redistribute Google Ads data
